

"We as parents can only do so much to protect Jackson's health. Immunizations help assure a healthy life."  
—Jackson's Mom

# Immunizations:

Are one of the greatest achievements of medicine. They have been so successful, many parents have never seen most of the illnesses and complications that vaccines prevent. But these diseases still exist. Your child needs immunizations to be protected from them.

## your child's name \_\_\_\_\_'s Immunization Schedule

Birth	Age 2 months	Age 4 months	Age 6 months	Age 12 months	Age 15 months	Age 18 months
Hepatitis B	Diphtheria, Tetanus, Pertussis	Diphtheria, Tetanus, Pertussis	Diphtheria, Tetanus, Pertussis	Hepatitis A	Diphtheria, Tetanus, Pertussis	Hepatitis A
	Polio	Polio	Polio	Measles Mumps Rubella		
	Pneumococcal	Pneumococcal	Pneumococcal	Pneumococcal		
	Hib meningitis	Hib meningitis	Hib meningitis	Hib meningitis		
	Rotavirus	Rotavirus	Rotavirus	Chickenpox		
	Hepatitis B		Hepatitis B			
<b>4-6 years</b> - Diphtheria, Tetanus, Pertussis - Polio - Measles, Mumps, Rubella - Chickenpox <b>11-12 years</b> - Tetanus, Diphtheria, Pertussis - Human Papillomavirus - Meningococcal (groups ACWY) <b>16 years</b> - Meningococcal (groups ACWY) - Meningococcal (group B)*						
<b>Every Fall: Flu Vaccine</b> Everyone 6 months and older						

\*Persons aged 16-23 years (preferred age is 16-18 years) may get a vaccine series for short-term protection against most strains of serogroup B meningococcal disease.

## Parents

Protect your little one with immunizations.

Immunization Branch • 850 Marina Bay Parkway • Richmond, CA 94804  
 This publication was supported by Grant Number H23/CC922507 from the Centers for Disease Control and Prevention (CDC).

**“Immunizations are a key factor in our children’s growth, health, and lives.”** —Kalaya’s Dad

## Why are immunizations important?

Immunizations can protect your child against serious diseases that can make your child very sick. These diseases can even cause brain damage or death.

Immunizations also protect the community. If children are not immunized, they can be a health threat to babies too young or sick to get all their shots.

Immunizations are also called baby shots, boosters, vaccinations, shots, or vaccines.

## Are they safe?

Vaccines are very safe and effective. They prevent diseases by making the immune system stronger.

Babies are immunized when they are very young, because some diseases that vaccines prevent are much more dangerous for babies or young children.

Sometimes children get mild reactions to the shots, like fever, a sore arm or leg, or swelling where the shot was given. Your doctor or nurse can talk about the risks with you before your children get their shots.

## What you can do:

- 1 Start your baby’s shots on time – at birth.
- 2 Make sure your child stays on schedule (see back).
- 3 Bring your child’s yellow Immunization Record to every doctor visit.
- 4 **Comfort your child by:**
  - ✓ Breastfeeding your baby during and after shots
  - ✓ Staying calm yourself
  - ✓ Talking in a soothing voice or singing
  - ✓ Holding your child
  - ✓ Bringing a familiar toy or blanket to use to distract & comfort your child
  - ✓ Allowing your child to cry

Your child needs shots at birth, 2, 4, 6, 12, 15 and 18 months of age.

Immunize your child for a lifetime of health.

**“Our hope is that Kaylee, grows up big, healthy and happy.”** — Kaylee’s Family

## Need more information?

It is important that health information is based on credible science.   
Your doctor or clinic will give you Vaccine Information Statements to read.
