

Your baby may be at risk

for COVID-19, flu and whooping cough

COVID-19 and flu can be dangerous for you and your baby, causing:

- Low birthweight
- Premature birth
- Stillbirth
- Hospitalization
- Death

Whooping cough can also be dangerous for babies, causing:

- Coughing fits
- Gasping for air
- Serious lung infections
- Hospitalization
- Death

If you're pregnant, get:

- **Flu vaccine and COVID vaccine and booster(s) as soon as possible and**
- **Whooping cough (Tdap) vaccine in your third trimester of every pregnancy**

The protection you get from these vaccines passes to your baby during pregnancy. Your baby counts on you for protection.
